

## Black Screen in Viewer for New LG Devices

Posted by punkshoo - 2016/03/02 09:10

---

I am currently getting a black screen on my LG Zone 3 and LG Leon. Both of these devices are running Android v5.1. All control functions work. When I click on the screen I see it work on the phone, however, I cannot see my phone screen in the viewer. I am using REALVNC Viewer. What can I do to see my screen?

I am having the exact same issue. I have changed display capture method to both options and still nothing. I have an LG 22c and an LG nexus 4. Any feedback would be greatly appreciated.

Thanks for your time
